| <b>Project Name</b>  | Implement Client Script & UI Policy (Incident) |
| <b>Maximum Marks</b> | Marks 5                                        |

### Coding&Solution

This section evaluates the quality and completeness of your implemented Client Script and UI Policy and the overall solution. Your submission should demonstrate working functionality, clean configuration practices, and alignment with the defined Incident Management requirements .

#### : Instructions

- 1.Ensure the Client Script and UI Policy are properly configured and follow ServiceNow best practices.
2. The solution should address the core Incident form requirements and implement the key functional requirements.
3. Include all Client Script, UI Policy, UI Policy Action, and configuration details required to reproduce the solution.
4. Attach or link to your configuration documentation or repository, if available. **Solution Summary**

| Field                           | Details                                                                                                                                                                                                                                                                                                                                                         |

| <b>Programming Language(s)</b>  | JavaScript / ServiceNow platform configuration                                                                                                                                                                                                                                                                                                                  |
| <b>Framework(s) Used</b>        | ServiceNow Incident Management, Client Scripts, UI Policies, Incident Table and Form                                                                                                                                                                                                                                                                            |
| <b>Key Features Implemented</b> | <ul style="list-style-type: none"> <li>• Client-side validation on Incident form</li> <li>• Dynamic field visibility and mandatory control • UI Policy for controlling Incident fields</li> <li>• Automatic form behavior based on field values</li> <li>• Validation of Incident form data</li> <li>• Improved user experience and data consistency</li> </ul> |

|                                      |                                                                                                                                                                                                                                                                                        |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pending / Incomplete Features</b> | No additional project features specified                                                                                                                                                                                                                                               |
| <b>Setup / Run Instructions</b>      | Open ServiceNow → Navigate to Incident module → Configure the Client Script → Configure the UI Policy and UI Policy Actions → Open the Incident form → Enter or modify Incident details → Verify dynamic field behavior and validation → Submit the Incident and validate the results. |

### Code Quality Checklist

| S.No | Criteria                                                                                                          | Status (Yes / No / Partial) |
|------|-------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 1    | Solution components are modular and organized into separate ServiceNow Client Script and UI Policy configurations | Yes                         |
| 2    | Meaningful field, script, UI Policy, and configuration names are used                                             | Yes                         |
| 3    | Configuration and script logic are documented where necessary                                                     | Partial                     |
| 4    | Client-side validation and field behavior are handled for critical Incident operations                            | Yes                         |
| 5    | The Incident form operates without critical errors                                                                | Yes                         |
| 6    | Configuration changes are maintained through ServiceNow update/deployment mechanisms                              | Not provided                |
